Jakarta Indonesia

A highly capable developer with hands-on experience architecting and building secure, high-availability applications. His expertise includes developing transactional e-commerce backends, systems for complex business logic, and creating dynamic, CMS-powered user interfaces. A detail-oriented professional dedicated to building reliable and scalable full-stack solutions.

Work Experiences

Metro Indonesian Software - Remote

Sep 2024 - Present

Full Stack Developer

- Developed a library of 10+ dynamic e-invitation templates, fully integrated with a back-end API to manage RSVPs, guest comments, and live event data.
- Executed a pixel-perfect implementation of a new brand design for one of Indonesia's largest english course company using Elementor and custom CSS to build a modern and responsive WordPress website.
- Architected and deployed the mission-critical backend for a custom ERP system that centralized real-time inventory management for 200+ unique products across 7+ retail branches, eliminating stock discrepancies and providing unified sales analytics for the entire chain.
- Built a complete CMS solution, using a custom Laravel API backend and a dynamic React front-end, which empowered the marketing team to build and deploy high-performance landing pages independently.
- Engineered a high-volume booking platform for a 9-branch retail chain, integrating a major payment gateway to securely process over 900+ daily transactions and automate the entire booking-to-payment lifecycle.
